

# Social Media Toolkit

## Title: National Glaucoma Awareness Month

For use during week 52: December 30, 2019-January 5, 2020

Launch Date: December 16, 2019

### Introduction

*\*Describe content of toolkit.*

*\*Describe background of topic*

*\*Describe the source(s) for the toolkit content*

Glaucoma Awareness Month is in January. This toolkit will provide information on what is Glaucoma, and information on how to manage and treat it. This will be provided through Facebook and Instagram posts, hashtags, and tweets.

Glaucoma is a group of diseases that damage the eye's optic nerve and usually happens when fluid builds up in the front part of the eye. That extra fluid increases the pressure in your eye.<sup>2</sup> Glaucoma can result in vision loss and even blindness. Glaucoma is the second leading cause of blindness worldwide; about 3 million Americans have glaucoma. Open-angle glaucoma, the most common form, results in increased eye pressure. There are often no early symptoms, which is why 50% of people with glaucoma don't know they have the disease. Vision loss from glaucoma usually affects peripheral vision and if it progresses, it will affect central vision. There is no cure (yet) for glaucoma, but if it's caught early, you can preserve your vision and prevent vision loss.<sup>1</sup>

Anyone can get glaucoma, but certain groups are at higher risk. These groups include African Americans over age 40, all people over age 60, people with a family history of glaucoma, and people who have diabetes. African Americans are 6 to 8 times more likely to get glaucoma than whites. People with diabetes are 2 times more likely to get glaucoma than people without diabetes.<sup>1</sup>

What can one do to protect your eyes and lower your risk of vision loss from glaucoma?<sup>1</sup>

- If you are in a high-risk group, get a comprehensive dilated eye exam to catch glaucoma early and start treatment. Prescription eye drops can stop glaucoma from progressing;
- Even if you are not in a high-risk group, getting a comprehensive dilated eye exam by the age of 40 can help catch glaucoma and other eye diseases early;
- Open-angle glaucoma does not have symptoms and is hereditary, so talk to your family members about their vision health to help protect your eyes and theirs
- Maintaining a healthy weight, controlling your blood pressure, being physically active, and avoiding smoking will help you avoid vision loss from glaucoma. These healthy behaviors will also help prevent type 2 diabetes and other chronic conditions.

Glaucoma damage is permanent—it cannot be reversed. But medicine and surgery help to stop further damage. To treat glaucoma, your ophthalmologist may use one or more of the following treatments: 1) medicine; 2) laser surgery; or 3) operating room surgery.<sup>2</sup>

### Target audience/high-risk subsets

*\*Describe target audience*

Everyone

*\*Describe high-risk or sub-populations, if appropriate*

African Americans over age 40, all people over age 60, people with a family history of glaucoma, and people who have diabetes.<sup>1</sup>

### Target Audience Needs/Issues/Considerations

*\*Include considerations that the opposition may provide*

There would be no opposition to this issue.

## Supporting Campaigns

*\*Include organizations that would have credible information and would be likely to have their own campaigns*

[American Academy of Ophthalmology](#)

[American Glaucoma Society](#)

[Centers for Disease Control and Prevention](#)

[National Institutes of Health – National Eye Institute](#)

[The Glaucoma Foundation](#)

[VisionAware](#)

## TWEETS

### Twitter best practices

- *Keep it short and simple--although messages can be <280 characters now, keep them short anyway!*
- *Post often--it is recommended to post 3 tweets per day, with different framing to reach diverse populations*
- *Post other relevant content from partners or followers*
- *Use relevant hashtags (maximum of 2 hashtags)*

<b>Tweet 1</b>	#Glaucoma is a group of eye diseases which in most cases produce increased pressure within the eye (glaucomafoundation.org)
<b>Tweet 2</b>	There are many different types of #glaucoma, but the most common type in the United States is called open-angle glaucoma — that’s what most people mean when they talk about glaucoma (National Eye Institute)
<b>Tweet 3</b>	Anyone can get #glaucoma, but some people are at higher risk. You’re at higher risk if you are over age 60; are African American or Hispanic/Latino and over age 40; and have a family history of glaucoma.
<b>Tweet 4</b>	Eye doctors can check for #glaucoma as part of a comprehensive dilated eye exam. The exam is simple and painless
<b>Tweet 5</b>	Currently, there is no cure for #glaucoma; however, through early diagnosis and treatment, the disease can be controlled before vision loss or blindness occurs.
<b>Tweet 6</b>	There are reportedly more than three million people in the U.S. living with #glaucoma, a figure that could increase to 4.2 million by 2030, according to the <a href="#">National Eye Institute</a> .
<b>Tweet 7</b>	January is #GlaucomaAwarenessMonth! Did you know there are currently more than 3 million people within the U.S. currently living with #glaucoma?
<b>Tweet 8</b>	Many aren’t aware that #glaucoma is a leading cause of blindness and without early diagnosis and treatment from your #ophthalmologist, it can lead to vision loss.
<b>Tweet 9</b>	#Glaucoma is hereditary - you are 10x more likely to have #glaucoma if you have a direct family member with #glaucoma.
<b>Tweet 10</b>	It is estimated that 50% of those suffering from #glaucoma are unaware they have the disease and therefore remain undiagnosed and untreated.

## INSTAGRAM

### Instagram best practices

- Post 3-4 times during the week
- Use varying content (not only picture sharing but include videos and graphics)
- Use relevant hashtags so people can find your content
