

Consortium of Eastern Ohio Master of Public Health
Operation: Accreditation
Webinar #4 goals

Information regarding the Council on Education for Public Health and accreditation for public health programs can be found at <http://ceph.org/>

The development and statement of goals is embedded in Criterion 1.1: Mission. One or more goal statements for each major function through which the program intends to attain its mission, including at a minimum, instruction, research and service.

Evidence showing the manner through which the goals were developed, including a description of how various specific stakeholder groups were involved in their development as well as a description of how the goals are made available to the program's constituent groups, including the general public, and how they are routinely reviewed and revised to ensure relevance.

Definition of a Goal: the purpose toward which an endeavor is directed. Goals should be simplistically written and clearly define what you are going to do.

Goals are needed for: Instruction
 Research
 Administration
 Service

Current Goals:

- Provide graduates with a foundation of public health skills and knowledge, including community assessment methods, analytic skills, research strategies, program implementation, evaluation and policy development within an ethically and culturally sensitive perspective.
- Provide an MPH program that produces competent practitioners through collaboration among academicians, researchers, public health practitioners, and students from each member institution, and the eastern Ohio community.
- Provide students with the knowledge and opportunities to apply public health concepts and skills to assess and improve the health status of residents of Ohio through research and service.
- Foster ongoing professional development of faculty, students and public health practitioners for the advancement of practice in the community.
- Assure at least an annual evaluation of overall program activity so that it continues to meet the needs of both students and the eastern Ohio community, and is based on the most current concepts and skills in public health research and practice.
